

# Natural Nitrogen Options

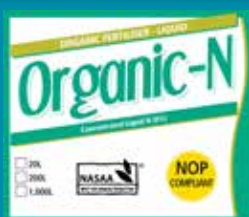

## Liquid & solid cost-effective Nitrogen

Organic crops often run short of nitrogen, which is seen as pale crops and reduced yields. Nitrogen is the building block of protein, vitamins, enzymes and lipids in all plants, and providing enough nitrogen is critical to maintain yields, product quality and profitability.

We now have 4 high analysis, high quality sources of N for certified organic growers.

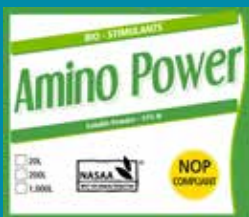

All NOP compliant for US market.

### Liquid Organic N - 8%

- For managing in-crop nitrogen demand and building yield
- Finely screened liquid ideal for application as a foliar or via fertigation
- Provides immediate nutrition to your crop
- Feeds and stimulates soil microbial activity for stronger plants and higher yields

### Soluble Powder - 13%N

- For in-crop adjustment and stimulating plant processes
- Highly soluble easy to mix formulation; ideal as a foliar or via irrigation
- Microbe friendly - stimulating improved root growth and better soil health
- Amino Acid 80%

### Pellet - 8%N

- 8%N - 1%P - 1%K
- High quality, high analysis pelletised fertiliser
- Apply as a pre-plant fertiliser or side-dress to boost early plant development and strength
- Combination of available and slow release nitrogen
- Ideal for vegetable, fruit and nut production

### Protein Meal - 13%N

- Apply as pre-plant fertiliser or side-dress to boost early plant development and strength
- Slow release nitrogen
- Feeds soil biology and plants
- Ideal for vegetable, fruit and nut production
- Cost-effective
