

For more efficient water & fertiliser use

“Increased input costs and the need to optimise water use, have fruit growers looking for new production methods and products.”

Organic Farming Systems is committed to helping all farmers improve crop and soil health with more sustainable farming methods, whilst maintaining or improving profitability.

There are a several cost-effective sustainable farming inputs that every farmer should use:

- ***OFS Humus 26*** - saves moisture & fertiliser
- ***OFS Fol-Up*** - enhances foliar nutrient uptake
- ***OFS Super Kelp*** - promotes root growth
- ***OFS Fish Emulsion*** - increases soil biology

We also provide expert scientifically based information on sustainable farming :

- *Free information booklets on soil health and composting*
- *Free Crop Programs*
- *Free organic recommendations from your or our soil and tissue testing*
