

Wheat - Vitazyme 2010 Replicated Trials

Vitazyme improves wheat yield (12.3%) & profit (\$40/ha)!

Vitazyme Treatments (4 replicates)

Control No Vitazyme
 Seed Only Seed Treatment; rate - 1L/tonne of wheat
 Seed & Spray Seed treatment plus foliar spray at early tillering; rate - 0.5L/ha

Monitoring

Yield (t/ha)
 Vegetative growth (NDVI analysis at Zadoks 32)

Results

Early wheat growth was increased by 6% as a result of the Vitazyme seed treatment.

Wheat yields were increased significantly (12.3%) by Vitazyme when used as a seed treatment with a mid crop foliar spray.

Similar results were obtained in barley trials.

Replicated trials conducted by AGRIVision

Profit Improvement (seed treatment & foliar spray)

Product Cost	\$20 - 22/ha	
Yield Increase	201 kg/ha	
Wheat Price	Feed - \$180 /t	APW1 - \$300/t
Extra Income	\$36.18/ha	\$60.30/ha

Vitazyme treated wheat produces exceptional root development

Vitazyme treated wheat shows excellent stalk strength, heading, leaf development and disease resistance.

Vitazyme increases head number.
