

FERTILISER - SOLID

# New Era Premium

High quality pelletised organic fertiliser

## Premium Organic Fertiliser

Includes meat meal, bone meal, fish meal, seaweed extract, composted poultry manure, sulphate of potash, soft rock phosphate for stronger plants. Ideal pre-plant for vegetables & basal fertiliser for fruit trees.

Provides:

- Full range of nutrients from multiple ingredients
- Living microbiology with added fishmeal to feed soil microbes
- Carbon 25%

The microbe friendly source of nitrogen, phosphorus and potassium plus carbon support soil biological life, helps balance soil, improves nutrient cycling and mobilises soil nutrient reserves.

The major difference between organic/sustainable fertilisers and synthetic fertilisers is the effect on beneficial soil biology and the solubility of the fertiliser.

New Era Premium encourages better overall plant growth naturally. It is designed as a pre-plant or basal fertiliser to provide natural plant nutrients for all crops.

Use as a pre-plant or basal fertiliser.

Apply 200kg - 2t/ha (20 - 200g/sq.m) according to crop needs.

(Confirm your crop requirements via soil analysis.)

N - 3.6%	P - 3.1%	K - 4%	Ca - 6.3%	S - 1.6%
Mg - 0.7%	Fe - 0.2%	Zn - 0.03%	Mn - 0.03%	Si - 1.4%

Carbon 25%

Organic fertilisers help regulate uniform uptake of nutrients and reduce fertiliser loss.

Example - 6 year long term study - found improved crop in 6 year comparison with composted poultry manure versus conventional. Researchers postulated the improvements were due to increased organic matter, microbial activity and plant nutrients. (Adam 2001)

Example - Turf - Application of pelletised poultry manure resulted in greater turf grass quality when compared to the same N rate of synthetic fertiliser regardless of aeration method. (Sprinkle 2009)

Example - Wheat - Grain yield was higher for mineral plus organic fertiliser. At half the rate, the mineral plus organic fertiliser gave the same yield as mineral only fertiliser. (Buondonno 1997)

Australian organic wheat crop thriving on Premium as basal fertiliser.
