

Strengthen your crop for profit

Activity

Stimulates growth, reduces stress

Results

Improved yield and quality: 5-15%

Savings

More efficient fertiliser use

Effective

20 years of research; 1,000 studies

Stress

Reduces environmental stress on crop

Replicated trial work in Australia and around the world shows consistent yield and quality improvements.

Vitazyme activates the plant soil - system.

Results:

Enhanced chlorophyll production allowing vine leaves to harness more energy from the sun

Larger and more efficient root system

Enhanced colour in table grapes

Improved plant defence system

Plant stress tolerance

Better grape quality and shelf life

Certified organic farm input

Harness the power of nature

Why Vitazyme works

The main compounds in Vitazyme are brassinosteroids, triacontanol, glycosides & B vitamins.

Brassinosteroids are a group of natural plant compounds that are important for a broad range of plant processes, including stem elongation, photosynthesis, ethylene biosynthesis, proton pump activity, xylem differentiation, and gene expression.

Triacontanol - well researched nano-compound active at extremely low concentrations to increase photosynthesis, thereby enhancing crop performance.

Vitazyme has multiple actives and multiple modes of action which means it is more likely to respond to the ever-changing environmental stresses that are agriculture.

A little goes a long way!

How to use

Recent studies have shown that the best results are achieved with programs specific to the production needs of your crop.

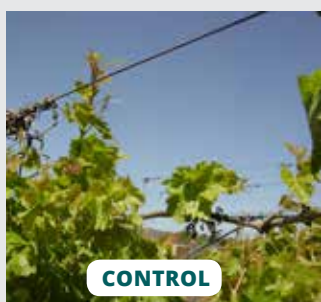

To improve colour apply either:

- 1.25-1.5L/ha, 3 times at pea size berry, pre- and veraison ; or
- 2L/ha pre- and post veraison (14-28 days apart)

Easy to Use

- Can be applied as foliar spray & via irrigation
- Can be mixed with fertiliser & ag chemicals
- Safe and non-toxic
- Cost-effective

A selection of Australian results

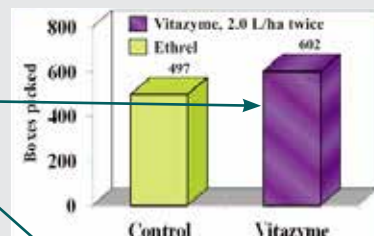

Vitazyme
- increased chlorophyll

A selection of International results

Treatment	Harvest date			Total
	March 19	March 24	April 8	
1. Control	70.6	8.1	9.4	88.1
2. Vitazyme, 1.0 liter/ha	75.1	4.9	11.1	91.1
3. Vitazyme, 1.5 liters/ha	82.1	7.4	4.5	94.0

- 82.1% picked at first harvest
- 21% marketable yield increase
- Improved colour
