Endophytic Trichoderma | Live inside the plant, not in the soil

Harness the power of nature

UNLOCK YOUR CROP'S GENETIC POTENTIAL

Sabel-X Trichoderma quickly enter the plant and once inside, produce metabolites that influence the whole plant (by switching on gene pathways) resulting in a positive effect on:

- Germination**
- Photosynthesis**
- Disease resistance**
- Yield & Quality**
- Growth and vigour**
- Root development**
- Stress resistance**
- Water utilisation**

The process of switching on gene pathways is a dynamic process and changes depending on the conditions within the plant. New technologies track the "switching on" of these gene pathways.

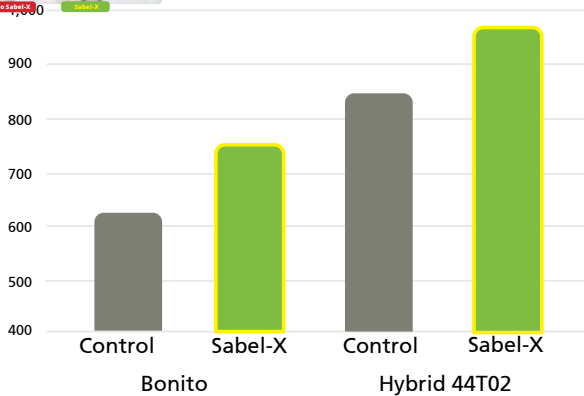

Sabel-X Canola Results

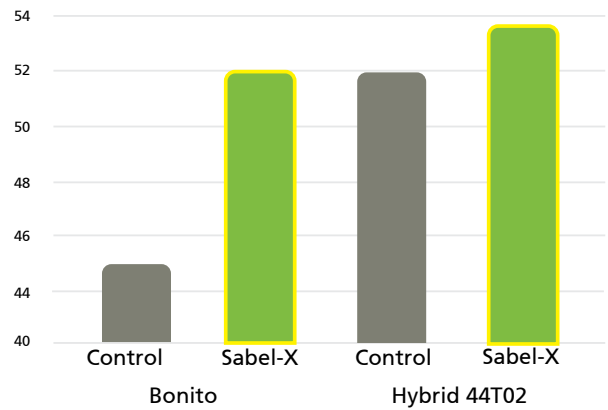

Australia 2019

Average Yield (kg/ha)

NDVI readings, green leaf area/treated plot

Average Vigour rating in % (DAS assessment)

How to use

Application rate : Seed Treatment

60g/ per 25kg of seed.

Apply as a dry seed treatment prior to planting.

Mix/shake contents of pack prior to use.

Sprinkle Sabel-X onto seed in hopper.

Treat in one bag increments to ensure uniform coating of seed with Sabel-X.

Mix until uniform seed coverage is obtained.

Plant treated seed directly after Sabel-X seed treatment has been applied.

Can be used on fungicide treated seed.
