

## Humus 26 Trials - vegetables

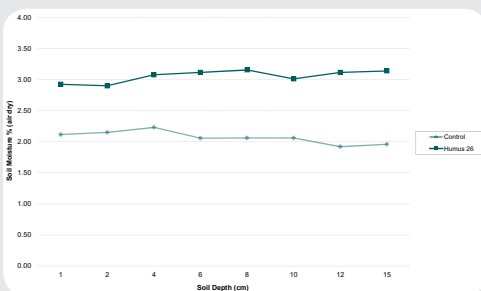

Humus rich soils have increased nutrient retention and water holding capacity as a result of improved soil structure. Ideal for sandy soils.

Humus 26 improved soil structure of sandy soil in only 3 weeks by improving fungal growth. We also measured a 10% increase in soil moisture after only two surface treatments (sprays) with OFS Humus 26.

Improved germination of lettuce with SFS Humus 26

On average 48% increase in soil moisture across different depths with Humus 26

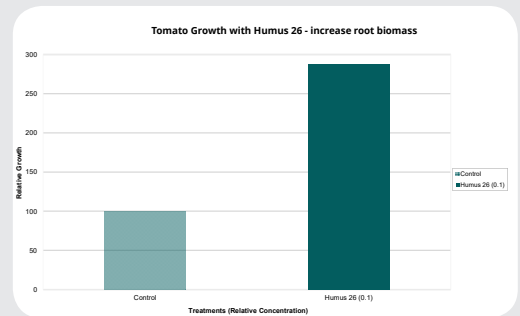

### NSW potato grower

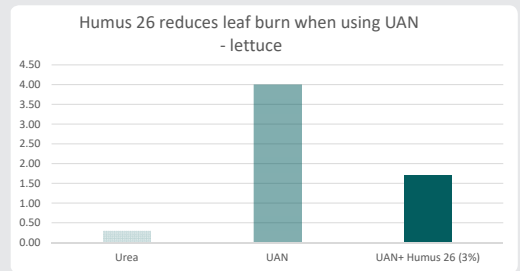

*"We increased income from our potatoes by \$600/ha with Super Kelp & Humus 26 that only cost \$121/ha"*

**Super Kelp** - 2 x 7L/ha; one spray at emergence, repeated 4 weeks later

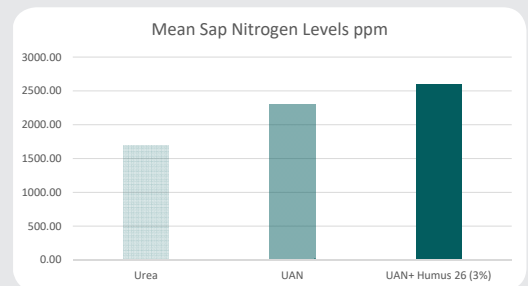

**Humus 26** - 2 x 10L/ha treatments; one spray at planting, one prior to row closure.

Humus 26 improved root biomass with tomatoes

Humus 26 reduces leaf burn when using UAN - lettuce

Humus 26 improves N uptake - lettuce
